

# Week3-L1

Number of participants: 26

Did you ever experience any of  
1. these biases as a result of AI being  
used?

17 respondents

Historical	29%	5 votes
Representation	65%	11 votes
Measurement	6%	1 vote
Aggregation	6%	1 vote
Learning	24%	4 votes
Evaluation	12%	2 votes
Deployment	0%	0 votes
Other	6%	1 vote

**Historical - Comments 2**

The model had certain racial biases/stereotypes in its statements.

Based on my Text style, it assumed my nationality

#### **Representation - Comments 4**

The model was trained to identify thyroid was applied to identify thyroid nodules, so it didn't work

I've been profiled as British because of my writing. Although that's hardly a bold leap.

Datasets not representative of population, specifically underrepresenting or mislabelling minorities, model was only effective on specific ethnicities

ChatGPT assumes a male identity and supposes you are male too (this is more obvious if speaking in a morphologically rich language)

#### **Measurement - Comments 1**

GP read codes (classifiers of illnesses) aren't used in the same way by different GPs,

#### **Aggregation - Comments 0**

No comments for this answer

**Learning - Comments 1**

Multiple times the LLM agent thought I'm a girl, while I'm not.
