

Assignment 1 has been
posted!
due Mar 23

Next quiz gets released
tomorrow!

Tutorial materials – very
sorry for delay in posting!
Will be posted ASAP

will be covering some
related material in
upcoming lectures

Language

- Words
- Rules
- The anatomy of language

Acknowledgments / slide credits: Frank Mollica, Chris Lucas, Mirella Lapata

Alex the Parrot

- <https://www.youtube.com/watch?v=IdYkFdu5FJk>

Alex the Parrot

- <https://www.youtube.com/watch?v=IdYkFdu>
- Lived with researcher Irene Pepperberg for thirty years (!)
- Interesting book (I have not read it but have it on my bookshelf):

NEW YORK TIMES BESTSELLER

Alex & Me

How a Scientist and a Parrot
Discovered a Hidden World of
Animal Intelligence—and Formed
a Deep Bond in the Process

A Top 10
Book of the Year
—Michiko Kakutani,
New York Times

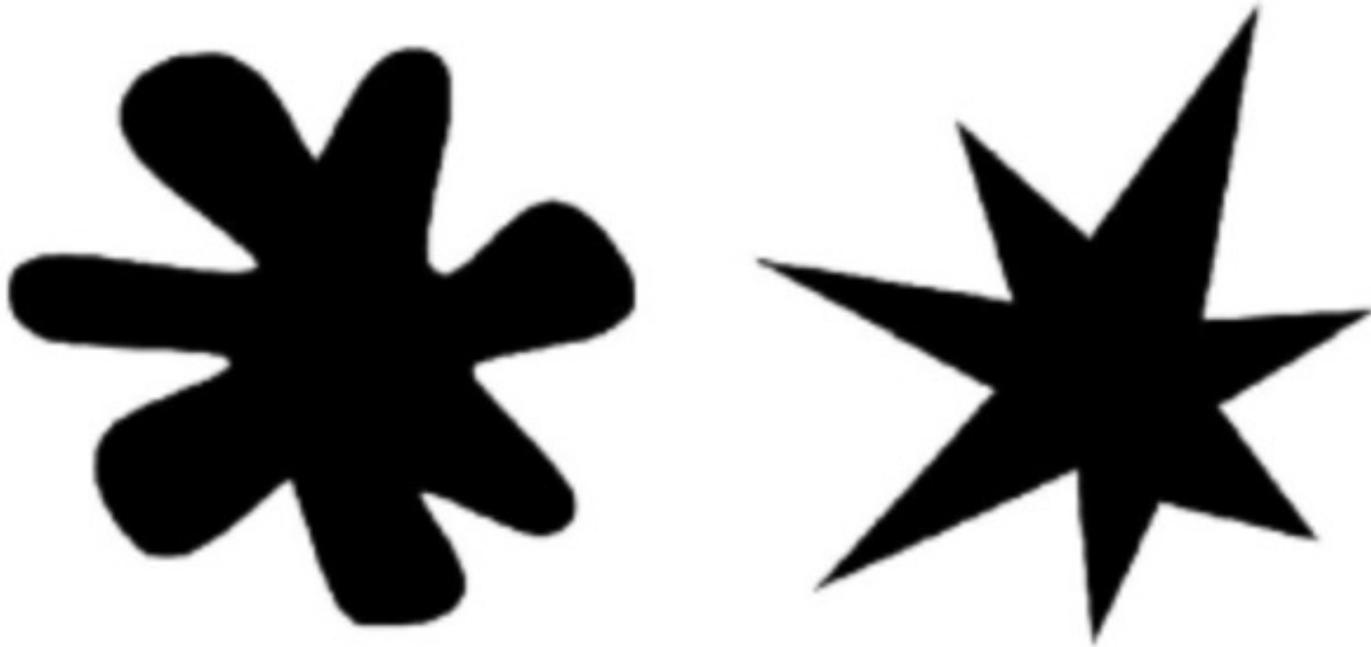

INCLUDES A NEW INTERVIEW WITH THE AUTHOR AND A READING GROUP GUIDE

IRENE M. PEPPERBERG

What is a word?

- A symbol that stands for something (referent)
- We say a symbol is grounded if it is attached to a concept
- Words are arbitrary, i.e., there's no reason that the word "cat" refers to a cat and the word "dog" refers to a dog.
- We could swap them.
- Is this true of all words?
- Onomatopoeia – words that sound like what they mean: buzz, meow

Famous experiment across cultures

- One of these is a bouba, and one of them is a kiki. Which is which?
- One of these is a takete, and one of them is a maluma. Which is which?

- “We report an online experiment that tested the *bouba/kiki* effect across speakers of 25 languages representing nine language families and 10 writing systems.”

What is a word?

- A symbol that stands for something (referent)
- We say a symbol is grounded if it is attached to a concept

- Words are arbitrary, i.e., there's no reason that the word "cat" refers to a cat and the word "dog" refers to a dog.
- We could swap them.

- Is this true of all words?
- Onomatopoeia – words that sound like what they mean: buzz, meow

- But these are the exception... for most words, the symbol is arbitrary

The mental lexicon

- Arbitrary sign: conventional pairing of meaning and sound.
- The mental lexicon is the set of all the words in the language.
- Often assumed to form a hierarchy or a network – mirroring how our concepts are organized
- Speakers of the same language have mutually intelligible lexicon entries.

Amazing facts about the human mental lexicon...

- Between birth and adulthood, children learn about 40,000 unique words and idioms (fit as a fiddle)
- During the second postnatal year, children's productive vocabulary accelerates dramatically: vocabulary explosion.
- People recognize and produce words extremely quickly:
 - meaning of spoken word is accessed by listener in 0.2 seconds.
 - The brain takes 0.25 seconds to name an object, and further 0.25 seconds to program mouth and tongue to pronounce it.

MacArthur-Bates Communicative Development Inventory (MCDI)

- How do children learn language? Have to start studying them BEFORE they have learned it!!!
- Amazing research tool developed starting back in 1975

Rules

- We do not just blurt out isolated words.
- Rather we combine them into phrases and sentences.
- The meaning of the combination can be inferred from the meanings of the words and the way they are arranged.

1. The boy saw the girl with the telescope
2. The girl saw the telescope with the boy
3. The boy with the telescope saw the girl

- Example of a rule: Noun phrase --> Verb --> Noun phrase

What are the rules?

- There must be a code, a set of rules that specifies how words may be arranged into meaningful combinations: **the grammar**
- Grammars are language / culture specific
- There are some shared properties, but some that can be distinct
- We'll talk about cultural differences more a bit later on

The expressive power of rules

- Expressive power of some representational system = how many different things can you represent?
- Rules are productive, defined over kinds of words rather than actual words (we assemble new sentences on the fly).
- Symbols contained in the rules are abstract (we can talk about anything we like!)
- Noun phrase --> Verb --> Noun phrase

The expressive power of rules II

- The rules are also combinatorial: a small inventory of elements can be assembled by rules into immense set of distinct objects.
- Noun phrase --> Verb --> Noun phrase
- What if you have 5 nouns and 2 verbs... how many sentences?
- 50 sentences
- 10,000 nouns, 4,000 verbs....
- 400,000,000,000 sentences (400 billion)

The expressive power of rules III

- The rules are also recursive: a small inventory of elements can be assembled by rules into immense set of distinct objects.
- the rules create an entity that can contain an example of itself
