# Week 3 Workshop Outline

- Activity 1: Prepare a Do Method
- Activity 2: Prepare a Make Method

Combining Say, Do, and Make Methods

Interview 1
- ask your main questions (say method)
- include make method, eg collage, and ask questions about it

Observation/Usability Test
- Participants undertake a usability test of a technology or you observe participants interact with a technology in a particular context/activity

Interview 2
- Ask for further detail on the usability test or your observations

Interview 1
- ask your main questions (say method)
- include make method, eg collage, and ask questions about it
- Introduce diary

Diary
- Participants keep track of activities/technology use/experiences over 3-5 days

Interview 2
- Ask for further detail on on diary entries

Activity 1: Prepare a Do Method

Discuss and decide on a do method (5 mins):

- What method – observation, usability test, diary – is best suited for your project?
- Write down a short justification for why you chose this method

Prepare and plan materials (15 mins):

- Aim and focus: what is the aim of your do method? What is relevant to your project? What do you want to observe? Where will you observe?
- Instructions: what instructions will you give to participants? What questions or tasks will you provide in the method you choose?
- Follow-up interview questions: what questions will you need to ask to elaborate on your observation, usability test or diary?
- Logistics:
  - Observations: When? Where? How long?
  - Diary: How will you deploy the diary? How many days? How will you track responses?
  - Usability test: How will you conduct the usability test? When? Where?
- Recording: how will you collect and record the do method?

Activity 2: Prepare a Make Method

Discuss and decide on a make method (5 mins):

- What method – collage, mapping, photo elicitation, card sorting, probe – is best suited for your project?
- Write down a short justification for why you chose this method

Prepare and plan materials (15 mins):

- Aim: what do you want to learn from this make method?
- Material: activities, instructions, resources for participants?
  - Are they engaging for participants?
  - Will you learn new things for your research project?
- Logistics:
  - What media do you and your participants need to use – paper, miro?
  - When will the activity take place?
- Interview questions: what questions will you need to ask (and add to your interview guide) to reflect on the make method?
- Recording: how will you collect and record the things made and the interview discussion?

Any questions?
